Under the guidance

of

Mr. Pankaj Singh
Associate Professor
IIM Raipur

Mr. Naveen Visvambharan
Digital Marketing Manager
Nippon Paint India Ltd.

Indian Institute of Management Raipur

June 2022

ACKNOWLEDGEMENT

First and foremost, I'd like to thank IIM Raipur and Nippon Paint for providing me the platform for exploring my skills and the corporate segment during this internship. This combination together is what made this intern a success and I am grateful for the same.

I'd like to thank Mr. Naveen for his continuous support throughout this journey, with no hesitation to help in providing the necessary details and directions I required. I'm grateful for Mr. Satish Kumar's timely guidance which helped steer the internship in the right direction. They both helped me grasp the Nippon Paint culture and project requirements. I'd like to thank Mrs. Rajeswari for her time and guidance, giving me the correct examples and mentoring as well.

I extend my gratitude towards my faculty mentor from IIM Raipur, Mr. Pankaj Singh, who was very helpful and supportive. Finally, I'd like to thank my supporters and members of the Nippon Paint team who provided the correct vision and inputs that were used to understand more about the internship itself.

CHAPTER 1: ABSTRACT

In the recent times, the growth of the paint industry in India has proven to be an outlier. With the changing economy and the changing mindsets of the people, the industry has witnessed a drastic shift on how the paints are perceived. The rise in the average incomes of people has led the paint industry to dive into the decorative paints segment.

With the outbreak of the COVID -19 Pandemic, the urge to digitisation has urged the shift of all segments expects production towards remote operations. Thus, the shift towards online operations, has reinstated the need for a better crawled website. Hence, Search Engine Optimisation was the need for better brand recognition and amplification. A better website always portrays the brand voice in a much better way.

Indian Premier League (IPL) is the most glamorous event that occurs every year. It itself is a Marketing stunt with numerous brands joining hands. The Tournament is properly set at the times of vacation when the children are free from school work burden and at evening times when the office work is completed. It is the best tournament which brands can harness , as it is the cumulation of Influential people from the sports industry and Film industry. Hence, as Sponsors for the Chennai Super Kings and Royal Challengers Bangalore for the year 2021, Nippon Paint had to improve the Brand Cognisance. Devising proper Media Action plans was necessary at these times.

CHAPTER 2: INTRODUCTION

2.1 General

The company's procedure and business operations were briefly explained in the first two days of the internship. Although the level of complexity was not explained, the details and intricacies were extremely intuitive. Of course, since it is a service company, the success of their story depends heavily on their supply chain and sales. Their supply chain is extremely automated. The distribution network is the most vast in South India – TN and Karnataka, though the sales is spread across throughout the country. The focus was primarily on the segmented market and hence they Entered the Indian market through Tamil Nadu. Currently head Quartered at Chennai with a lot of small depots across the country. With their brand so heavily recognized and a huge dealer network in southern India, they're able to achieve huge reach across all sorts of businesses and consumers. Their digital marketing space has also been at par with the most recent trends. Their advertisements are trendy, very smartly crafted. They have beautifully used the Indian Premier league to Amplify their brand cognizance among the consumers. But their biggest win should be their detailed website. It is the go-to destination for any consumer need. The website is heavily elaborate and has brilliant UI experience. But they did not stop there, and they are still working on the building a much better website.

Figure 1Nippon Paint – Asia's Real No.1 Paint

2.2 Global Paint Industry

As against the worldwide paints and coatings industry, which produces income of ~US\$160bn, the Indian paint industry is esteemed at ~US\$7.1bn as on FY20. Asia Pacific (APAC), the world's biggest coatings market with 45% portion of the overall industry and esteemed at US\$71bn+ in 2019, has been becoming quicker than the worldwide and developed markets because of moderately higher development in the economy, particularly in China and India. China is the biggest piece of the APAC market, involving almost 60% of volume and worth. Counting the following two biggest markets, India and Japan, the main three business sectors represent more than 80% of the volume and worth of the APAC area.

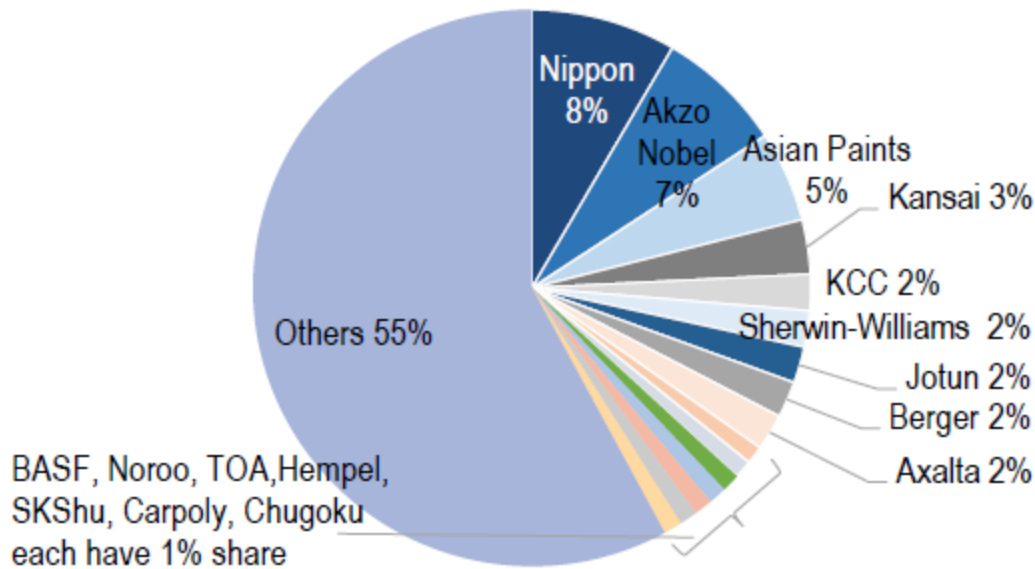

Figure 2 The APAC Paint Market Share Pie

2.3 Indian Paint Industry

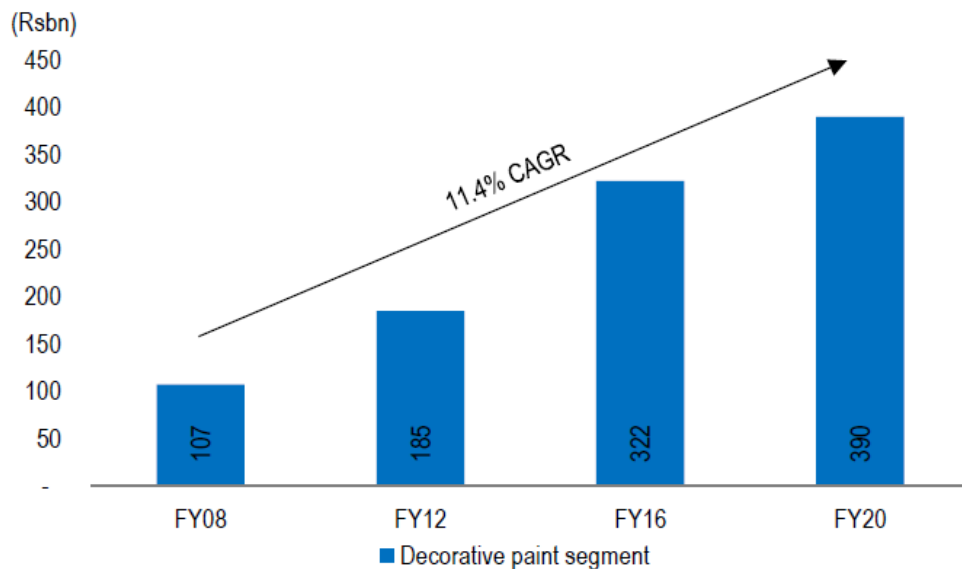

Figure 3 CAGR of the Indian Decorative Paint Segment

India, APAC's second biggest coatings market, is overwhelmed by the beautifying portion with ~75% market share. This is dissimilar to the worldwide and APAC markets' construction where brightening fragment (compositional) offers under 40%. Modern paint's lower commitment in India's general paint market is most likely owing to bring down modern and foundation improvement contrasted with other developed nations and non-industrial nations like China, and higher specialized ability needed in the mechanical paint fragment, which thus prompts insignificant inclusion of sloppy players and accordingly a lower market size. Worldwide, the best 10 organizations overwhelm the market with over half portion of the overall industry. Be that as it may, APAC and China stay divided with territorial and global players coinciding in these business sectors. The Indian paint

market, in contrast to APAC and China, is an oligopolistic market with the main 4 players controlling somewhat less than 70% piece of the pie of the general homegrown paint industry.

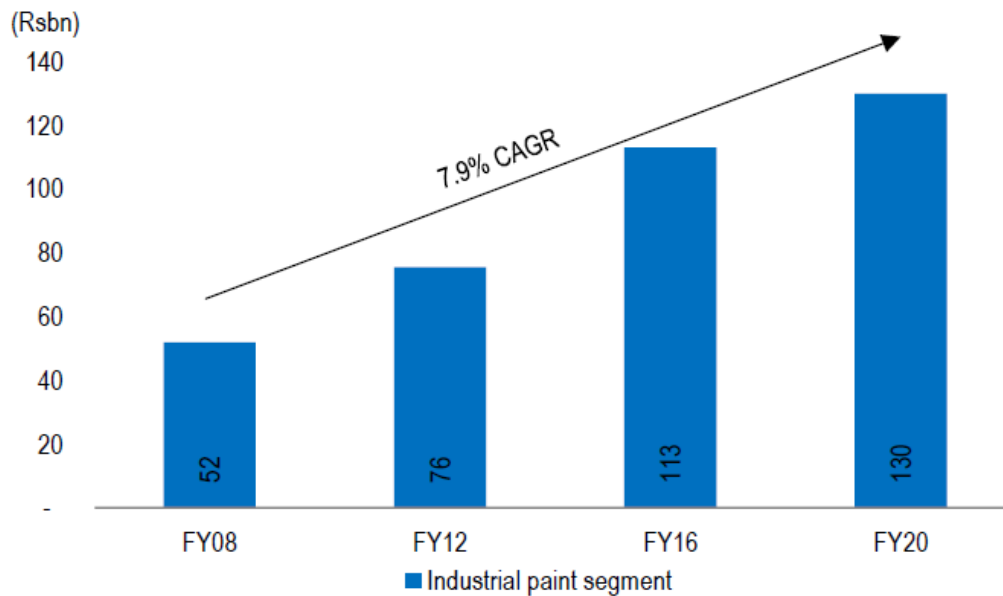

Figure 4 The CAGR of Indian Industrial Paint Industry

2.4 Decorative Paint Industry

The decorative paint industry includes a variety of products like

- Exterior Wall Paints
- Interior Wall Paints
- Wood Paints
- Enamels
- Primers
- Putties

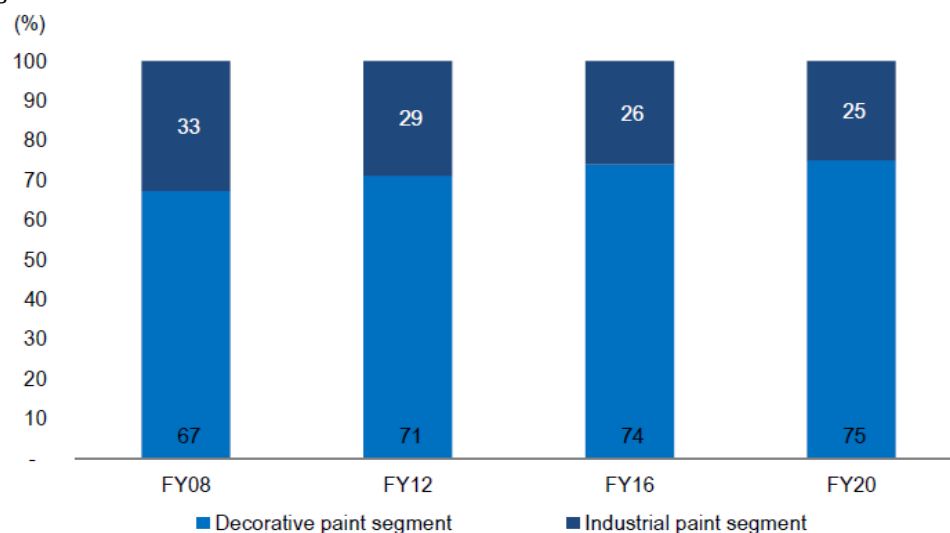

Figure 5 The Graph showing evident increase in demand of Decorative Paints

The Escalated growth to decorative segment paints can be attributed to

- a) The Rapid Growth
- b) More nuclear families
- c) Increasing Disposable incomes
- d) Reduction in Repainting Cycles
- e) Slowdown of Industrial expansion

2.5 Urbanization and nuclearization of families

The long-term growth of any industry is attributed to the Macro and micro-economic and also demographic factors which includes

- 1. Urbanisation
- 2. Nuclearization of the families
- 3. Increase in Income
- 4. Disposable Income
- 5. The tax paid to the government

The gross disposable income of the people has substantially increased and also the spending of people have also increased. The propensity to save has been decreasing.

2.6 Shortening of re-painting cycle over the last decade

Re-painting comprises ~70% of the improving section interest in India and universally. While re-painting is a capacity of different elements (counting pay levels, happy and marriage season and way of life improvement), new development is an element of progress in land and framework improvement, which depends on the by and large financial development.

Re-painting cycle in India has decreased altogether from 7-8 years till mid 2010s to 4-5 years now. Elements that have impacted decrease in the re-painting cycle are: the ascent in pay levels, expansion in number of leased houses (where the proprietors lean toward re-painting to pull in inhabitants) and critical simplicity of the artistic creation measure. The decrease of the re-painting cycle is in spite of the increment in the existence of paints as purchasers have been offering significance to style, change in looks and presence of their premises. One of significant issues affecting the opportune repainting of homes was the issue engaged with the canvas measure, including interruption to every day life, smell of new paint, cleaning after the painters left and so forth To address these issues, numerous organizations have been effectively wandering into express work of art benefits just as offering consultancies to their clients. These means have prompted the facilitating of the canvas interaction too as aversion of postponement in the re-painting action.

CHAPTER 3: DESCRIPTION OF THE ORGANISATION

Figure 8. Nippon Paint Blobby – Brand Ambassador

3.1 History of the Organization

The organization was established in 1881 by Jujiro Motegi as Komyosha. In the year 1888, the organization was fused and named as Nippon paint producing. While it again changed its name to Nippon paint in 1927. In 1954, organization set up a joint endeavor of 50:50 with Bee compound. In 2006, the organization entirely procured Bee synthetic substances. In 1955, Goh Cheng Liang set up his first paint shop in Singapore and turned into the principle nearby wholesaler of Nippon Paint. In 1962 the organization set up a joint endeavor with Goh Cheng Liang, with a 60-40 holding, the Nipsea Management Group.[9] In 1965, Nippon Paint set up its first paint producing plant in Singapore.

In 2016 Nippon Paint went into a Merger concurrence with Dunn-Edwards Corporation, one of the United States' biggest free producers of design, mechanical and superior paints. Terms of the arrangement were not uncovered yet the exchange was settled toward the beginning of March 2017 after which Dunn-Edwards will turn into an entirely possessed auxiliary of Nippon Paint (USA) Inc. Dunn-Edwards is situated in California and has in excess of 130 organization possessed stores and more than 80 approved sellers for the most part in the southwest United States.

In India, Nippon Paint is an establishing individual from the Indian Green Building Council. Green Building as characterized in December 2009, at Chennai, is a structure which utilizes less water, hopeful people energy effectiveness, saves energy, produces less waste and gives better spaces to inhabitants, when contrasted with an ordinary structure. Nippon Paint is likewise the beneficiary of The EMC TÜV SÜD Mark. "TÜV SÜD offers makers the chance to show consistence with EMC necessities with the EMC TÜV SÜD Mark. The EMC TÜV SÜD Mark is a particular accreditation mark that permits producers to gladly show their certificate accomplishments on one certificate mark."

3.2 Functions

Elaborating on the powerful supply chain, as it is the backbone of this organization. Their paint plants are so brilliantly designed that they can accommodate any kind of dye. Any combination, if the demand exceeds a particular ratio, can be made and supplied. They also have a few non-automated plants wherein if a new order or dye is required by the consumer, these plants can handle that since the company has more manual control over the dye mixtures.

The Marketing and Advertising teams work extremely closely with the sales team and with the consumers. The advertisements are crafted for particular sections of the society depending on their concerns and needs. Heavy market analysis and reach leaves them winning the consumers.
